RealEstate Webmasters - How to Add the RealScout Widget to REW

In order to add RealScout Widgets to your REW website you should follow the instructions below:

Step 1. Copy the head code and the body code from the RealScout Extras tab for the widget you'd like to use, paste both of them in a snippet in the backend of your REW site, you should name the snippet appropriately.

- a. Further Instruction: While in the backend of your site take all of the RealScout widget code and the Div afterwards, and place them both within a CMS Snippet in the backend of your REW site and save it named as something like "testsnippet".

Step 2. Go to the page you'd like to add your RealScout Widget to and call that snippet by placing it on the page you would like it to appear on by adding #testsnippet# to the page. That will call it on the page in question.

Step 3. Check your site to make sure the widget is appearing correctly.
